

Hundred years of experience, Up-to-date technology, Never-ending enthusiasm...
Since 1898, abiding to our values, we offer smart solution, high-quality and reliability.

With 45.000m² closed production area, over 600 employees specialized in different areas
and a customer-focused mentality, we produce "customer satisfaction".

MAYTEKS production includes 900 tons of Knitting, 650 tons of Dyeing & Finishing
and 250 tons of Printing per month. 60% of this is exported as fabric
and the rest is sold to garment exporters in Turkey.

Our main markets are some of the leading countries in textile:
Italy, France, England, Germany, Holland, Sweden, Finland, Israel and USA.

ABOUT

OUR STORY

1898... Remarks the foundation of the family business, "Antebi Tekstil", which later became the roots of our current international exporting company. With the knitting and apparel facility founded that year, "Antebi Tekstil" became one of the first textile exporting companies in Turkey.

1925... The first hosiery facility was founded.

This was followed by the second and third facilities founded in 1935 and 1957 respectively.

1983... Third generation of Antebi family in business, decided to make a reorganization and institutionalize the company in order to build one of the major textile fabric exporters with international standards, under the name "MAYTEKS ÖRME."

The same year knitting facility was totally renewed.

Since then MAYTEKS has kept the notion of being %100 Eco-friendly as a priority while building and expanding every inch of the production facilities.

2000... The dye-house and finishing facility was founded.

2005... R&D was founded, with the idea of developing new fashion fabrics as well as creating more Eco-friendly fabrics such as the Organic line.

2006... As a major step of becoming an international company, first participation in an international fair was made.

First collection entirely made by MAYTEKS designers was introduced.

At that point, every year one collection was introduced, later on this number became two.

Since then MAYTEKS has participated in many fairs in all around the world including, Paris, Munich, Moscow, Istanbul, Tunisia, Israel and New York.

2008... Major changes in the production line were made in order to increase the capacity and to meet the changing needs of the market. The same year printing facility was founded.

2015... Fourth generation of family joined and a whole new adventure started with conscious garment production and our brand Antebies.

... Still and always growing to meet our customer demands.

SERVICES

KNITTING

- Open width and tubular knitting machines
- Machines in low gauge
- Production in cotton, viscose, modal, polyester, tencel and their blends
- Machines capable of engineered striped knitting
- Quality control of every roll

DYEING

- HT machines with capacities from 25kgs to 1500kgs
- Dyehouse management
- Automatization for dyes and chemicals
- Eco-friendly dyestuffs
- Chemicals in accordance with Reach Regulations
- Lower consumption of water and energy

PRINTING

- Design team offering the latest trends
- Color sampling, and sample printing before production
- Printing up to 12 colors in latest technology machines
- Digital printing technology
- Reactive, disperse, pigment, burn-out and discharge printing processes

SERVICES

FINISHING & SPECIAL EFFECTS

- Open width and tubular compacting
- Finishing with aloe-Vera, anti-bacterial, flame resistance
- Silk touch finishing
- Optimum shrinkage values in all fabrics including %100 viscose

- Crush effect on polyester blended fabrics
- Up to 6 colors tie-dye effect
- Raising and shearing effect
- Sueded effect with carbon brush machine

QUALITY LAB

- Approved from major brands
- Color matching with spectral photometers
- Sensitive lab-dipping with automated multi-pipetting
- Climated room for fabric conditioning
- Shrinkage test with wascator and high speed test machines
- Fastness, pilling, sublimation and elongation tests

SUSTAINABILITY

Commitment to environment is the foundation of Mayteks's business model. Understanding the importance of environmental awareness within the textile industry we develop facilities and train employees with the mission of having a conscious perspective throughout all operations.

Our objectives and actions towards this goal includes,

Development of conscious qualities

15% of our current production consists of conscious qualities including Organic, Recycled and BCI. One of our main company goals is to increase this percentage gradually in the upcoming seasons.

Efficiency in chemical and dyestuff consumption

We challenge ourselves to improve efficiency in chemical and dyestuff consumption, investments on automation are made parallel with this objective.

Recycling of water

The water used within our production facilities is being transformed to heat energy.

Sustainable projects

Collaborations with global leading brands for sustainable projects on water and energy waste management are organized.

We understand our responsibilities and contribution to sustainable development of the environment and invite our clients to join us on this cause.

PRODUCT LINES

CONSCIOUS

Organic & Recycled &BCI Qualities

Since the introduction of the Conscious line in 2001, promoting this line has been one of our priorities, because we believe in the fight against environmental pollution, everybody has to do their part.

By using conscious products our clients do not only contribute to the welfare of nature, but they also increase the awareness of their customers.

BASIC

This is the line where we offer the fundamentals of the knitted textile business.

Over the years we have gained the experience and the know-how in order to give our customers implicitly what they desire.

This line mostly consists of single jersey, rib, interlock, 2 ply fleece and 3 ply fleece in cotton, viscose and polyester blends.

DENIM

Denim can never be out of fashion.
It is a must in the collections of our customers.

In this line we offer our customers fabrics that have the denim look, but do not have indigo dyestuff.
The qualities in this line include single jerseys, fleeces and various other fabric types that have the denim look. The printed denim fabrics are a very good addition to this line.
Another surprise for our customers is "organic denim" qualities.

PRODUCT LINES

PUNTO

In the recent years punto quality has become one of the major demands of our customers. This has lead us to develop ourselves in this area and to make more investments.

This line consists of different punto qualities that can be used in every season, ranging from 180gr/m2 to 400gr/m2 with different blends. A very important part of this group consists of printed punto qualities.

DEVORE

A never ending trend is the devore qualities. For this line, despite the general belief that it is mostly used in summer, we have developed a lot of qualities that can be used throughout the whole year.

This line includes devore qualities on single jersey, 2ply fleece, 3 ply fleece, rib and velour.

PRINT

Over many years, our print designers have developed a large database of prints. One part of this collection embodies the designs that are timeless classics, these we prefer to call "all time favorites". The second part are developed each season according to the demands of the market and our customers. Within this collection, reactive, pigment, disperse, discharge and burnout techniques are used on a wide range of fabric qualities ranging from very light fabrics to much heavier.

PRODUCT LINES

LINGERIE

With the silk touch finishing that we have expertized in many years and the long durability of our fabrics, this is one of our best selling lines.

On top of the more basic cotton and polyester blends, this line includes some very exclusive fabrics with micro-modal, modal, tencel and bamboo.

COLLECTION

Every season, our team of well trained designers travel around the world to create this line. They understand the customer demands and the upcoming trends in the market in order to develop our own collection.

In this line our aim is to help our customers to stay always ahead of the trends.

SPORTS

The last addition to our lines, Sports line combines high-performance qualities with the fashion trends in active-wear.

Consisting of majorly polyester blended qualities, the line offers sports oriented finishings such as Quick Dry, Water Repellancy and alike.

ORGANIC & CONSCIOUS GARMENT PRODUCTION & SEASONAL COLLECTIONS

At Mayteks we started garment production on 2015 with the same dedication, we feel for our fabrics. Our goal is to use qualities developed by Mayteks and expand our services by creating new areas of partnerships with our clients. We do organic and conventional garment production upon customer request as well as presenting trend based collections seasonally for womens-wear, kids-wear and active-wear.

ANTEBIES

Antebies is Mayteks' sister brand, created as a result of our passion in sustainable textile production and our expertise in production and design. Antebies is a GOTS certified organic brand specialised in underwear and loungewear for babies, kids and maternity. The collections offer quality products together with empowering rural women in our society through handmade details we use as our logo.
